FOR IMMEDIATE RELEASE

Bio/Data Corporation receives ISO 13485:2003 registration

HORSHAM, PA, August 1, 2006 – Bio/Data Corporation (“Bio/Data”), Horsham-based developer, manufacturer, seller and distributor of hemostasis products, announced it has received a second International Standards Organization (“ISO”) registration. ISO is a network of the national standards institutes of 157 countries coordinated in Geneva, Switzerland.

Bio/Data's newly earned ISO 13485:2003 certification, specifically earmarked for medical devices, follows the 9001:2000 general-industry registration the Company achieved in 2004. Registrations acknowledge that their recipients meet internationally recognized quality standards.

“This puts us on an equal footing with some of the largest global companies in our field,” said William M. Trolio, vice president of the 37-year-old Philadelphia-area privately owned company. “It is a significant achievement for a small medical-device manufacturer like Bio/Data. We had to assess and expand our quality system, educate the entire company and demonstrate to the registrar that our quality system works.”

The ISO 13485:2003 standard is based on ISO 9001:2000, which promotes the adoption of a process approach when developing, implementing and improving the effectiveness of a quality management system. However, a 13485:2003 ISO registration is directed for the design, development, production, installation and servicing of medical devices and related services.

“That’s why we are proud to showcase our PAP-8E Platelet Aggregation Profiler® and related products at the Mayo Clinic’s 12th annual Bleeding and Thrombosis Conference in Rochester, Minn. this week,” Trollo added. This year the Mayo conference includes a focus on von Willebrand Disease.

Bio/Data’s PAP-8E is a modern laboratory instrument utilized for testing platelet function. Test results provide a vital pathway enabling medical professionals to diagnose various stages of hemostasis disorders, including von Willebrand Disease, hemophilia and Glanzmann’s disease, or to monitor the use of antiplatelet drugs like Plavix® and aspirin. Other Bio/Data products consist of reagents and disposables to augment a variety of platelet testing.

Bio/Data’s web address is www.biodatacorp.com. The company’s aggregation products are CE marked.
