

Tele-Check ✓ is a telephone guided calibration verification service procedure performed while the aggregometer remains in your laboratory. A Bio/Data service technician directs you through the calibration verification process. Required materials are shipped to the laboratory in advance of the scheduled **Tele-Check ✓** appointment. Calibration results generated by the instrument are submitted to Bio/Data for review by a Quality Control Representative. Upon approval, a Certificate of Testing and Calibration Verification will be issued along with a **Tele-Check ✓** Calibration Verification Sticker.
